

Mohammad Abou Chaheen

Computer Science Student

✉ shaheen.mhmd98@gmail.com ☎ +961 76056589 📍 Saida, Lebanon 🔗 Mohammad LinkedIn

🐙 Mohammad Git

Profile

Third-year Computer Science student skilled in Python, Java, JavaScript, React and Node.js. Experienced in building web apps, AI models, and scalable APIs. Passionate about problem-solving and teamwork.

Professional Experience

Machine learning intern, CodSoft Apply ML algorithms for real-world projects, including data preprocessing, model development, and evaluation.	09/2025 – 10/2025
web development intern, Codveda Technologies Developed responsive websites using React, front-end and back-end features, and optimized web applications for performance.	08/2025 – 09/2025
web development intern, Code Alfa Built responsive web apps focusing on UI design and interactivity.	06/2024 – 09/2024
Java Programming Intern, Code Alfa Developed three Java GUI applications involving OOP.	06/2024 – 07/2024

Education

Computer Science Student, Beirut Arab University GPA 3.5/4.0	2023 – 2026 Beirut, Lebanon
--	--------------------------------

Computer Skills

Languages	Frameworks & Tools
• C++/Java/Python • SQL/PHP • HTML/CSS • JavaScript • JSX/XML • Assembly • Verilog	• React • Node JS/ Express • Bootstrap • Git/GitHub • Android Studio • MySQL

Languages

- English
- Arabic

Projects

Machine Learning for Diabetes Risk Prediction Diabetes Risk Predictor uses machine learning (Random Forest, AUC 0.97) to analyze health data, identifying key risk factors like Polyuria to enable preventive care for its patients.	09/2025 – 12/2025
--	-------------------

AHLA BHAL TALLEH - Lebanon Exploration Platform, <i>Centralized Hub for Tourism & Local Services</i> Built a user-friendly platform for discovering Lebanese attractions, with interactive maps, reviews, and emergency services using React, Node.js, and Google Maps API.	03/2025 – 05/2025
Arabic News Classification Using Machine Learning, <i>Comparing NLP Techniques for Efficient Categorization</i> Built an Arabic news classifier using Naïve Bayes and TF-IDF, achieving high accuracy on the Khaleej dataset (7 categories). Optimized NLP techniques for scalable text categorization.	03/2025 – 05/2025
University Management System, <i>Data Structures Implementation for Academic Operations</i> The University Management System is a Java-based application designed to simulate core academic operations within a university setting. The project leverages fundamental data structures—Arrays, Linked Lists, Stacks, and Priority Queues—to manage students, faculty, and courses efficiently.	11/2024 – 12/2024
Database Query Analysis for Restaurant Management, <i>Analyzing Key Data Relationships in a Restaurant Database</i> This project involves constructing and analyzing SQL queries to extract meaningful insights from a restaurant management database.	

Volunteer Work

community outreach volunteer Supported donation campaigns for underserved families, strengthening my logistics planning, time management, and communication skills.	09/2024 – Present
emergency response and health awareness volunteer Participated in relief distribution and awareness campaigns, gaining valuable exposure to emergency support operations. Strengthened my ability to stay calm under pressure, follow procedures, and offer compassionate assistance.	09/2022 – 05/2023
